

Environmental policy.

Our aspiration:

Be an environmentally responsible company, and to carry out our production processes with a focus on minimizing the CO2 impact on the surrounding environment, while being technically and economically possible.

Develop world-leading irrigation technologies with a focus on the optimal use of limited water resources.

Offer current and future customers environmental declarations of their products (Green Procurement), if requested.

When developing our own products, the aim is to use environmentally declared components where possible.

In connection with the purchase of technical assistance equipment that uses energy and resources, the environmental conditions of the relevant solutions are assessed.

Ensure compliance with the current and future environmental legislation to which the company is subject (RoHS II, REACH, etc.).

Continuously streamline the management system and our environmental performance through environmental goals and action plans, as well as a focus on protecting the environment and preventing pollution.

Ensure that service providers are aware of our requirements for environmentally sound behavior in the course of their work on our behalf.

Actively involve employees in environmental work and continuously inform about our initiatives in the environmental area, as well as expectations for the individual's responsibility and efforts.

Focus on ensuring that our environmental management system as a minimum meets the requirements of the applicable ISO 14001 standard, customer requirements and other voluntary requirements that the company has chosen.

Continuously implement improvement measures for the benefit of the environment where technically and economically possible.

Continuously review and publish our environmental policies on the company's website.

We strive to comply with the U.S. Dodd-Frank Act regarding Conflict Free Minerals.
